Part-by-Part Description

Imagine you are the owner of a small printer manufacturing company. You were asked by the International Law Company (ILC) with offices all over the world to come and present your product. Use the following illustration to present the product to the company representatives of the ILC. Describe the physical characteristics of the product (EPSON 500). If necessary, describe how the parts are attached and what their functions are. In about 300 words, write a part-by-part description of the device, giving the technical specifications of five main parts only. Start by writing an audience and purpose analysis of about 70 words.
